ENGR 1182 | SolidWorks 5: Feature Based Modeling
SW05 - IN CLASS Activity

Breaking it Down into Steps:

- The object to the right can be created many different ways. Can you determine at least 2 different methods (starting on different planes) and create the same object?
- Try to start from different planes and see what the result is (Front, Top, Right)
Edge Features:
Create the following shape according to the features and dimensions.

- First break this object down into features (you should be able to create this in 2 sketches)
- Then use 3D Fillets for the 4 rounded edges
